

#627 How a Diagnosis Becomes a Self-Limiting Belief and How to Reframe Health Challenges with a Positive Mindset | Dr. Michael Rankin Sr.

Dr. Wendy Myers

Hello, I'm Dr. Wendy Myers. Welcome to the Myers Detox Podcast. On this show, we talk about everything related to heavy metal and chemical toxins, how those toxins cause health issues, and how to detox those toxins slowly and safely. We also talk about more advanced topics than you'll hear on other podcasts. I love talking about bioenergetics as well. Today, we have my personal doctor, Dr. Michael Rankin Senior, on the show. We're gonna be talking about diagnosis conflicts. We're gonna be discussing the harmful impacts of medical diagnoses and how to reframe health challenges with a positive mindset.

We're gonna teach you how to flip the script because people embody the diagnosis that they receive. It can even become part of their identity. We talk about how these medical diagnoses can become self-fulfilling prophecies and harmful word curses if internalized. We're gonna talk about reframing health challenges with gratitude and positive affirmations, and how that can support healing. We'll talk about addressing root causes, like emotional trauma, nutrition, circadian rhythm, exercise, and many other things, and how that's crucial rather than just treating symptoms like giving medication for anxiety, for example. We'll talk about protecting children from harmful labels and diagnoses, and supporting them with unconditional love, and how that's so vital.

This show is just so full of brilliant insight from Dr. Michael Rankin, his whole modality, how he operates, and why he so despises diagnoses. It's natural. When you go to the doctor, you wanna figure out what's wrong, what's going on with you. You just wanna feel better. But many people, they receive a diagnosis or they're told they have to take medication for life, or they're told that there's nothing that can be done, and these things really scare people. They get scared into doing treatments or biopsies or things that can lead to harmful treatments or they have hopelessness or they go to hospice or they're told there's nothing more that could be done. They're sent home to die. These become self-fulfilling prophecies. We'll talk about what you can do instead and how you can flip that script.

Our guest today is Dr. Michael Rankin Senior. He's a doctor of naturopathy. Dr. Rankin's approach resolves complicated health issues, including cancer, pain, sleep problems, emotional trauma, and brain issues, and vaccine injuries as well. He's the only doctor who has successfully found solutions for unsolvable issues. He's the only doctor who answers the question, why can I not heal? Dr. Rankin has created groundbreaking work at the Rankin Medical Center, focusing on programs for emotions causing cancer conflicts, how you're born with cancer cells, and he tells you why yours are out of control.

We talk about his emotional development programs, TER, which has trapped emotional responses and how you can incorporate every known emotional conflict research and how you can apply it for the rest of your life. You'll be free if you follow the lead to joy. He also uses Chinese therapies that the Chinese have used for centuries to control cancer stress. We also talk about the use of bio resonance software, CAP tests and biomedical tests for cancer levels so that you know how to control them. You can learn more about Dr. Rankin's work and work with him as well testingcancer.com. Michael, thank you so much for coming on the show

Dr. Michael Rankin Sr

Wendy. I'm so excited to see you today. This topic is one of the most important topics I believe that we've ever covered. It is one of the most essential that's impacting everyone. So thank you for having me.

Dr. Wendy Myers

I wanted to talk to you about this also because I run into this issue all the time with friends, with loved ones who go to the doctor trying to figure out what's wrong with them. They get a diagnosis and it literally can become people's identity where they just say, I have an anxiety disorder, I have a depressive disorder, or they just see themselves that way and they're not told anything about the alternative things that they can do besides taking a pill. So, can you talk a little about that and the problem with that?

Dr. Michael Rankin Sr

Well, I'm so grateful about this topic because 100% of all the patients we see, and 92% of them are people who are told they have very advanced cancer issues or very advanced brain traumas or very advanced anxieties. Every one of them has been given a diagnosis that is almost like in a biblical term, a word curse. So when someone says, I have, you're claiming what the physician said to you, which was not accurate. We understand one simple truth. A diagnosis is a manipulative term to make you jump like a frog. So when they did studies and then we've done studies ourselves where we'll have somebody say, I have the same thing they told me that caused them to come to see me in the first place.

When we check them, the level of energy, which is called voltage in the human body, goes so low that now they're susceptible to everything. We know for a fact that when the voltage level is high above 700, which we measure when the voltage levels above 700, the possibility of any health challenge being out of control is almost non-existent. As soon as you say, I have the diagnosis that the professional told you to have told you that you have, you're literally believing in a lie. As soon as you say that, like take the last six or seven years, people said a fake word that began with seed. I have this so and so symptom of blah, it's a fake word.

So now they turn a fake word into a real word. Now they imagine what that is because the 'I have' is filled in with all the programming they got from television or from their professional advisor or whatever the case may be. So people have turned the professionals they meet into false gods. I'm not a biblical scholar by any stretch of the imagination, but I grew up in a family where my father did not believe in drugs

ever, like never. The only time we actually ever saw a physician is if we had a broken bone that had to be set.

If we just had a crack, we didn't see the physician. My dad said, if you go to somebody that offers a drug as a solution, they're either stupid, lazy, ignorant, or they just don't care. So that kind of thinking, it makes the person who is at risk with the diagnosis very much at risk because if you follow what you're being told about the diagnosis, you'll make a very bad decision. The word 'I have' is a claim of whatever the doctor said you have, which is 99.9% of the time not accurate. When you look at the methods, Wendy, that they use to test people, CAT scans, PET scans, x-rays, sonograms this, gram that, gram this whatever. Those things are completely inaccurate. You cannot see cancer with a visual evaluation.

It is biologically impossible to see cancer on a visual evaluation. They know. Why do we know it? Well, they proved it to you because they said we have to do a biopsy. Well, if they already know it, why do they do a biopsy? And they'll give you all kinds of reasons for the biopsy. Well, if you're really gonna understand what is actually happening in your body, you'd actually have to scan every inch of the body. Do they scan every inch of the body? No. What have they done for decades? A woman goes and gets a mammogram, which is the most violent insult to the breast and all the lymphatic tissues of the breast, which is a hundred thousand miles of tissue in the lymphatic system. When you x-ray a breast, for example, you're sending all of that cancer causing x-ray through the entire lymphatic system to the rest of your body.

And we know because we import a technology called bio resonances that we imported because when I trained in China, I realized that they don't do blood tests, they don't do urine tests, they don't do hair samples. They don't do any of this stuff because it said it's horribly inaccurate. When I realized what they're doing, they're actually looking at the energy of the body. They are looking at where the voltage or that level of the body is out of balance. Because wherever the body's out of balance, that's where the issues are. 100% of all patients, Wendy, that we've ever tested that have come to us and say, I have breast cancer. We test them. They actually have six to eight other cancers they don't know about.

So when you say, 'I have,' you have now projected that I have to the rest of your body, which stimulates all the cancer spreading stem cells. And we know from Dr. Weinberg at Stanford University that, if you do chemotherapy, you make your cancer worse. Well, if he said it, and he is at Stanford University, one of the largest centers in the United States that treats conventional cancer, he probably knew what he was talking about. Why did he expose that topic to the world? Because he was trying to study a drug to reverse the implications of spreading cancer stem cells to the body, which goes wherever the voltage is weak. He was trying to develop a drug, which he never did because it's impossible to do that.

When I studied in China, Wendy, guess what? 2200 BC the emperors commanded the physicians and all the other wise people to make a remedy for this thing that was exposing his body, which turns out it was cancer cells. They commanded them to make a remedy. Those remedies were made in 2200 BC So now we have cancer herbs. Since 2200 BC there's been a cure for cancer. Now, when you say that online, what is the word I get attacked for more than anything else. Cancer has been cured. I get attacked violently. Why do I get attacked violently? Because people say, what are you talking about?

My grandmother, my grandfather, my brother, my cousin, whatever, they died of cancer. No, they didn't. I said, send me the records. They sent me the records. They got killed by chemo. They get killed by radiation. They starve to death. They became anorexic where they just lost hope and stopped eating. Number five is where they put 'em into a center. I won't say the name, but they put 'em into a center and they give them opiates and overdose. Who's the other person? They gave increases of opiates and overdose them until they passed away. Let's just call it Dr. Gian. They call it a better name. So it's a good marketing name.

Ads 11:19

A word from one of our sponsors. Two of the most powerful supplements for women's health are whey protein and creatine. Studies show that women have about 70 to 80% lower natural creatine stores than men, which impacts our muscle function, muscle recovery, our brain functioning, and even our mood. Puori Creatine Plus

combines pure creatine monohydrate with trine to support muscle strength, performance, muscle recovery, faster workout recovery, and cognitive health as well.

I love the results of taking creatine. I honestly had never taken creatine in my life before I started taking the Puori Creatine, and I absolutely love its effect on my mental clarity. It's also especially beneficial for both pre and postmenopausal women as well. It's shown in research to support bone health, improve cortisol response, support thyroid function, and so much more.

And like everything that Puori makes sure each batch of Creatine Plus is third-party tested for over 200 harmful contaminants. It's clean and certified by the Clean Label Project as well, so you're only getting clean, safe ingredients and the test results are published online for complete transparency. All you have to do is scan the QR code on the bottle.

Now let's talk about whey protein. Protein is essential for women. A lot of people are not getting enough protein and many protein powders on the market are loaded with toxins and heavy metals and harmful contaminants, but the Clean Label Project reviewed over 160 top selling protein powders in the US and found that 47% exceeded California Prop 65 safety limits for lead with 21 containing double the acceptable. That's horrifying when you think about it. How many people are drinking protein shakes daily, believing that they're doing something healthy?

That's why I use and trust Puori's PW1 Whey Protein. I absolutely love the vanilla flavor. It tastes incredible. I love the dark chocolate also. It tastes like fancy chocolate milk, but it's clean and safe, unlike a lot of other cacao and chocolate products on the market. My daughter Winter loves the vanilla flavor. She loves making smoothies. And recently, Vogue also named Puori PW1 Whey Protein, the best whey protein powder and for all the right reasons if you ask me. Like I said, my daughter's making smoothies daily and I have peace of mind knowing that she's using this protein powder that's clean, pure, and safe. It's been tested for purity.

Here's how I use the PW1 and creatine. Every morning I make a shake with coconut water, a scoop of the PW1 protein and the Creatine Plus. I add berries, maybe a banana, some dates, a little pinch of salt and that helps me stay strong, focused and energized throughout the day. I know that I feel good knowing that I'm fueling my

body with truly clean supplements. So go feel the difference for yourself. Taste the difference. Go to puori.com/wendy and use code Wendy at checkout for 20% off. That code even works on your already discounted subscriptions, giving you almost a third off of the regular price. So don't wait. Go try the PW1 and the Creatine Plus today. Clean science-backed supplements that you can actually trust. Again, go to puori.com/wendy and use the coupon code Wendy.

Dr. Wendy Myers

They tell them, oh, you have six months to live. You have less than a year to live. And they internalize that and believe that and embody that and it comes true.

Dr. Michael Rankin Sr

Exactly, Wendy. It is so debilitating for the patient to say, I have six months to live. I have 90 days to live. I am dying. Well, whatever you expect to have, you will absolutely have it. So thank God. Literally, when people come to me, the first thing I do is deal with the spiritual blasphemy that they've been given by some false god that called themselves a professional and gave them that diagnosis.

That diagnosis, 'you have six months to live,' is a word curse and a lie given by a false god. Why do people believe in a false god? Well, when you look up like this and you're a little kid and you're looking up to your parents and we're always taller than you, or you're laying in your crib and your parents are looking over you saying things to you, they're literally programming your alpha cycle. Where do all programs harbor in the entire body? The alpha cycle. What can we teach people to do to reverse the alpha cycle? How do we do that? We look up, hold their breath. When you hold your breath, what happens? The amygdala starts kicking in in a panic saying, breathe, breathe, breathe. And you're holding your breath and you're holding your breath, and you're holding your breath while you're looking up.

As soon as you let it go with an Oh, like that, you now let that whole thing, you're just programming your mind. I'm so grateful. I'm happy. I'm so grateful. I'm happy. I'm so grateful. I'm healed. I'm so grateful I'm healed. You now program that into the alpha cycle, and now that's the tune you play on. As long as you don't go back to the false god, then that tune is the one that's gonna play in your brain. So as little kids, you're

looking up to the doctor and he says, you have a cold, you had the flu, you have some, you're programming the alpha cycle. So you learn all these fake words. In 48 years as a doctor, starting in nineteen seventy seven, three years after Micah was born in 1977, I started learning the debauchery of conventional medicine.

I was in the oncology ward at a major institution, and I'm watching these people come in and look like normal people. And in a matter of seven to 10 days, they come back. Same people who've been getting all these conventional treatments for oncology. They're starting to look like cadavers. They look great.

Dr. Wendy Myers

But they're still used today. They're still using chemo and radiation today, just like they were 50 years ago.

Dr. Michael Rankin Sr

Wendy, 97% of all people who take conventional treatment will die 97%.

Dr. Wendy Myers

And that included my father as well. He didn't die of esophageal cancer. He died of chemo, which caused him to lose 120 pounds in five months, and then radiation that destroyed all the tissue in his esophagus and the sutures wouldn't hold, and he bled out and died from that.

Dr. Michael Rankin Sr

Oh my goodness, my goodness, my goodness. The other word that is a horrible word is, sorry. People don't understand. We say the word, sorry, all day long. I wondered why people say that word? We don't say that word. I'll say that word, but people say that word all the time. I was talking about my little puppy. So we have this little puppy named ULA and Barkley, which is Michael's dog. And they got together, they're brother and sister, and the people said we are gonna have horrible dogs. I said, now we're gonna have the most beautiful dog. So they bred and she got pregnant. She produced five offspring. One of those offspring got lost in the weeds because she rejected the offspring.

That's what they do. So I found the little offspring and I brought her in and tried to get the last little dog, the nurse, but she wouldn't do it. She would keep kicking her away with her feet. People say, that's really mean. I said, no, it's survival of the fittest. Darwin said, survival is the fittest and the smartest, and the rest will perish from the earth. Well, animals know that. Why don't humans know that? Well, we have a lot more control over ourselves than animals do. So when I was talking about my little puppies, and I said, we lost one of our little puppies. The lady said, oh, I'm so sorry. I said, why did you kill my dog? Well, no, no, no. That's a terrible thing.

Oh, I said, you just said sorry for killing my dog. I said, the little dog passed away. She goes, I'm sorry. Well, I said, you just killed my dog. Well, you did kill my dog. Stop saying the word, sorry. So Wendy, I did a little study. This is a really important thing 'cause this is part of programming. This is part of the diagnosis conflict. How many times do you think they say the word, sorry. In a 40 minute program throughout from the morning that televisions are on at eight o'clock in the morning till television go off conventionally about 10 o'clock at night. How many times do they say the word, sorry. 57 times in 40 minutes on every program I've ever watched.

Michael was punking me, as Daniel says, punking me. He sent me this program called The Resident. He said, pops, you'll really love this. It's an emergency room program. You're gonna love it. So I watched this program and I'm thinking, why would he think I like this program? They say the word, sorry, 57 times. They said the word cancer. 72 times in 40 minutes. Cancer, death, cancer, death, cancer, death. Program, program, program. Cancer, death, cancer, death. And then they'd say, steroids 152 times in 40 minutes. Infection, steroids, dental problems, steroids, on and on and on and on. I said, my guys, the programming is horrible.

7 to 11% of all programming in a conventional television scheme on anybody's television. Seven to 10 times every 40 minutes. They're saying cancer and death. They're saying steroids. They're saying pharmaceutical drugs. They say, see your doctor for this. See your doctor for that. See your doctor for this as if you're stupid. So I hand out these three books, Cancer is a Metabolic Disease, the Body's Made In Christ For Water, and Dr. Allen Saul's book, Heal Yourself. These are three books that I have everybody read. I said, by the time you read these three books, you'll know more than all the professionals you've seen since you were born.

People start reading these books. They realize my doctor is stupid. Well, he is not really stupid. He is ignorant. Now, stupid is knowing you're stupid and it's still making the same decision. So let's just give him the benefit of the doubt. Let's just say their programming is terrible. But when I watch people getting a diagnosis in this ward, you have breast cancer. You have, you have, you have. They're getting a diagnosis of conflict as if it's a word curse from this false god, because it's a false god. What do we do in church? And I'm not saying church is bad, but what do we do in church? We look up, they speak all this stuff into us and we just receive it.

What's the Old Testament? Talk about abuse of women. Oops. That's not a good story. What do they talk about? When Jesus was on the planet, they ripped the skin off his back and beat him to a pulp. What's the thing we learned from Jesus? That is our saving grace, Wendy, that you and I use today. We talk about in the very couple sentences of the Bible, he says, there is light. What's the light? We're the light. We're the light of the world because God puts that light in us to love and bring love and light to the world. We do that by this discussion we're having today.

When I had a lady with a root canal on the left side, which then, as you well know, affects the breast. Why did she do that? She could have called me instead of going to a dentist that gave her a root canal, which is deadly. A root canal will kill you prematurely. So I took this radio device behind me. I took a picture of her X-ray. I took her blood sample, and I had her on the phone with me, and I turned the radio device dials, while I'm praying in the Holy Ghost.

I just prayed in the Holy Ghost, which is pure love, and devoid of any carnal, anything in me. And she said, Dr. Rankin, what are you doing? I said, I'm converting the power of that root canal, which blocks 65% of your entire body. It blocks all of the 65% of your entire body, including your breast and your colon. I'm converting that with the power of God's love and giving it back to you with unconditional love. By the time I finish that 27 second protocol that I did on this lady, she goes, oh my gosh, I'm so tired. I gotta sleep. I said, how long have you been in pain? Three weeks. I said, when did you start the pain?

Right after my root canal? Why didn't you call me? She said, I was ashamed. Why was the lady ashamed? Because when she was younger, her great-grandmother said,

you don't deserve to be happy. So as she had this program from her great grandmother, you don't deserve it. What is that? It's a program. What is diagnosis? It's a program. What can we do about that, Wendy? We can reverse all of it. Any diagnosis, conflict. We can reverse with God's love. So when love flows through us, it's one of the reasons why you've been so successful as a person and why you've been successful as a mom and why you've been so successful in everything you've done is because God's love flows through your heart to everybody you talk to.

You give agape. You learned a long time ago. If you give agape love, which is unconditional love from your heart, everybody will heal well. You have those frequencies in your mouth. I have those frequencies in my mouth. My children have it in their mouth. And so when you give that unconditional love to people, it comes with pure light. We are the light. It says there is light. Well, even talking about us, Wendy, do you know how long it took me to understand that I'm not overly, I don't catch the picture right away. Six years in Genesis, in the first several in just Genesis to understand what it meant. So when he came out of Egypt, what did he do?

He had to give him six curses and then fix the six curses. He gave him six curses and then fixed the curses. I said, Jesus, why'd you give them all those curses? Because they wouldn't believe me. They were stiff necked. Okay? What happens when people that were trying to help their stiff neck, they were programmed to be stiff necked. They got a curse, a diagnosis. Stiff neck. Stiff neck. Stiff neck. So what do we do? They saw the waters being parted. Who did that? God did that to prove them one more time. Go across the river. And then when they tried to capture them, as they escaped, he flooded everything and those who were trying to kill them, the diagnosis, people were trying to kill them, he flooded them.

What could we do now? Let them be flooded. Okay, so then when they get into Promised Land, Wendy, what did they do? They complain and they build items. What happens when you complain? You are complaining and giving yourself a diagnosis of death. I am so sick. I am so sick. I am so sick. Oh, I have this, oh, I have this. This is a word curse

Ads 25:23

And now a word from one of our sponsors at the Myers Detox Podcast. I wanna tell you about a lip peptide treatment that I've been using and I've gotten amazing results. It was created to help you restore smoothness, fullness, and lasting hydration to your lips while protecting against visible signs of aging and environmental stress. And what I love most about this lip peptide treatment is that it contains true energies and signature proprietary bio photon frequencies to enhance cellular communication, optimize ingredient absorption, support collagen production, and helps lips maintain their smooth, fuller appearance over time. It's something I'm really into right now at age 53, and honestly, I can't ever see myself using any kind of skincare unless it has frequencies in it that enhance its effectiveness and sends new information to your skin into your lips to improve their appearance.

This Tru Energy peptide contains plant-based botanical oils, vegan moisture, ceiling waxes, and a collagen boosting clinically studied peptide infuses the Tru Energy signature frequencies to conditioned, smooth, and energized lips for a healthier, more youthful appearance. Each ingredient is also sourced to meet high purity standards and doesn't contain any synthetic fragrances, parabens, toxic ingredients, or harsh petrochemicals. So if you're ready to smooth away the look of fine lines around your lips, maintain lasting softness and hydration without stickiness, enhance natural lip volume and contour, protect against dryness, flaking, and environmental damage, and energize your own lips, repair and renewal cycles, Tru Energy is offering a BOGO special so you can get buy one get one free for a limited time for my listeners only.

Go to trytruenergy.com/wendy3 to buy one, get one offer. This is something that I use every single night. I absolutely love this product. I highly recommend it.

Dr. Wendy Myers

I have to be very careful of that 'cause it's very easy to fall into, oh, I'm so tired today. Oh, I didn't sleep. Oh, I feel really nauseated. You can just have this tape playing all day long that then comes to physical fruition because you believe that 'cause maybe a momentary you feel tired for whatever reason, or you just woke up and you're like, oh my God, I'm so tired I didn't sleep. Whatever's going on, you can just play that tape all day long and manifest that over and over and over.

Dr. Michael Rankin Sr

So your diagnosis conflict is the cell talk, right? What do we replace with a diagnosis, conflict of our self-talk. What do we replace with a diagnosis curse that was given to us by the professional, right? Why do people take a doctor as a professional, as if they have some ungodly control over you. Because they've taught that the person is the authority. What are people taught in church? The pastor, the priest, the bishop, the pope, whatever you wanna call 'em. They're the authority. So now you believe the authority no matter who they are. Well, the only authority for me is Jesus Christ because he is the only one I believe. He is my mentor, my boss, my implication for all my life. So when I get something like we're talking about, I'll just say, Jesus revealed his nature. What is a reaction?

So when I first moved back to my farm, Wendy, I found my father's body. He was gone. I didn't know he was gone 'cause I was 16 years old. I knew nothing. We had just delivered one of our little ponies as a wonderful little gift to somebody. When he came back, we found his body. Well, I've been programmed that when you experience something is because you sin. So now I'm thinking we must have sinned because here's my dad's dead body. We must ascend. Where did I carry that sin? Where did I carry that diagnosis conflict? On my feet. Why in my feet you asked? Because I can't move forward until I fix the problem. So how did I solve the problem of the rash on my feet? I went back in time and I realized that my father was not the body. My father was in the presence of God.

Six months later when I cut myself on a piece of glass intentionally. The only time I didn't work, Wendy, the way that God protected me after my father passed away is when I went to work. The only way I stayed out of trouble was by going to work midnight till late in the morning, midnight till eight in the morning. I was at work. You can't get in trouble at work. Now, Gloria was across from me on another machine. I could have gotten in trouble, but I didn't. I could have, but I stayed out of trouble by working. The only night that the factory shut down, I went to a friend's house where they had more liquor than a liquor store. It turns out I have a violent allergy to alcohol, which everybody does by the way.

That's why they get drunk. That's why they feel so bad. That's why they have an alcoholic experience because they have an allergy. It's an allergy stress response to stimulus. That's why we created these devices that you can literally put on your head. I admit from a fashion standpoint that they're not only attractive, but when you take these programmable pods, and I put these programmable pods on my temporal lobes, and I put these glasses with more radio devices like this, now they're on my frontal lobe and my temporal lobe. They're reprogramming my entire mind. My vision is returned to normal.

Why did I have a vision problem in the first place, Wendy? Because until I cleared out the fact that I had not killed my father 'cause when I tried to revive him, it's called effort unreceived. I tried to revive him with what I'd learned from Mark as well. BMD was CPR. Well. You can't CPR cadaver. And the sound was horrible. That sound in my ear of not reviving. My father's effort was un-received so I could not see the future. So my vision started going bad. Then later on as I'm walking through the property, I shot into a trash pile. There was a stainless steel spoon and Rico shade hit me in the eye.

I literally have a dent in my bone and a dent in my eye. Later on, that dent became the memory of my father's body. One night I was coming back from Michael's, after we worked at his clinic all day, and he's gonna fix a dinner for us. He's an absolute chef, as you well know. So he made this wonderful meal. I'm driving home and there is this big huge 25 foot tall sign on the side of the road. I couldn't see it. All these lights were coming at me and I couldn't see the road. So being stubborn instead of pulling over 'cause I was blind, I just covered my eyes up and realized it was my left eye that was dominating. My left eye was a ricocheted bullet that connected me to my father's body.

So then I just drove home like that. When there were no cars, I could actually see the lines on the road later on. What I did was I programmed my alpha cycle. I'm so grateful my father is alive and well in the presence of God, because when I cut my arm at Luther's house, my blood was black, Wendy. I didn't realize that when you're in a full moon and there's no streetlights, there's no red. So the full moon does not project red into the blood. So it looked black. I literally, 'cause I was so drunk, admittedly, I stuck my finger in the hole. I could feel all these tendons and I went, wow.

I could feel everything. And people say, are you nuts? No. I said I was drunk, but a piece of glass was sticking out of a barrel. I went over and I was gonna abuse myself because that memory had popped up about my father. When I cut myself, I'm looking at my arm and I said, my God, my blood is black. Jesus said, your father's with me instantaneously. I realized he was in the presence of God. I didn't know what it meant because I wasn't programmed that way in the schools. I went to school. I didn't realize when you pass in your body, you're in the presence of God instantaneously. Later on I realized that and all other conflicts left me. So then I stopped trying to heal everybody.

So for the first 30 years of my life, I'm trying to heal everybody and save everybody's life. That made me an extremely effective doctor. So we had over 98% effectiveness with cancers and brain traumas, whatever else, with a tremendous amount of effort, like 18, 20 hour days. Now we have over \$400,000 in equipment. We have other kinds of technology. We have a hundred percent success with cancer, brain traumas, concussions, dementia, vaccine injury, a hundred percent success with all of it. Wendy, you've been here so you know the effect of it when you raise the voltage with people. By using different technologies like the Infinity Bed or the Therapro or light therapies, you can literally raise the voltage.

Your hydration works when you raise the voltage. All these supplements you're taking can actually be consumed when your voltage is too low. You have no love in your stomach, you have no love in your liver, you could take a thousand dollars a month in supplements and they go right into the toilet. You might as well dump 'em there first, because if your love is not in your organs, which it's not, and we could literally test that and we could see it on the bowel residents, 'cause you've got one, you can literally see that stem cells are not even being produced.

Well, why get a \$7,000 stem cell? Why don't you just stimulate the stem cells? So we stimulate the stem cells from DNA and I'm working on somebody in China. I'm working on somebody in England. I'm working on somebody in Italy, and I'm working on somebody in Wyoming. I watched their catabolic nature. The woman was given a word curse. You have kidney failure. You're on a kidney transplant list. We hope we can keep you alive until we get your kidney. You're dying. You're dying, you're dying.

When I ran her on my bowel resident system, which she eventually got, I'm running it forward 'cause she didn't have the brain capacity to do it.

She was 94% catabolic. Wendy, can you imagine if you're catabolic and you're breaking down, what's gonna happen? Nothing death. So when I tested her and I realized that she had maybe two months to live at the most, because she was so catabolic overnight, she went from 94% catabolic to nine to 47% catabolic. Now she has 2% catabolic and the rest is working. So she sent me a text message to go, Dr. Rankin, I dunno what you've done for me. She said, I felt so bad for so long. I said, when did it start? I muscle tested. I said, what about 13 years old? She said, yes. My mother screamed at me nonstop all day because I did something wrong.

Where did all that screaming go? It went to her feet. Where was the most painful part of her feet? The bottom of her feet. What part of her foot was the world's painful? The kidney. I thought my mother was gonna kill me that day 'cause I did something so wrong. What did she do? I left my bike behind her car and she ran over my bike. Her mother was screaming at her because she ran over the bike that they saved money for her 'cause they weren't rich and they destroyed the bike. So she screamed at her mother. Where did all that go? Into her feet. I said, well, let me ask you something about your feet. I said, I've cleared everything else, but that remaining conflict.

I could see it in your feet. I said, how do your feet feel? She goes, they hurt like crazy. I said, well, the screaming of your mother at the age of 13 is in your feet. I said, are you ready to let that go? How do I do that? I said, grab your foot. She grabbed her foot. I said, look up and hold your breath. And while you're doing that, I had her put her hand under her foot and on top of her foot while I'm doing the bowel resonance. And I said, Jesus, thank you for hitting my feet. Thank you for showing me how to love my mother unconditionally, and release her forgiveness in my feet. I'm so grateful. And she cried for 20 minutes.

She said, I didn't realize how much my mother had hurt her. I did realize I harbored all of that anger towards her in my feet. It's like a little kid stomped her foot. She stomped her foot 'cause she would never raise her voice to her foot 'cause her mother scared her to death. Literally when we reversed all that and I took all that energy with one hand on the file residence while I'm doing this, her foot stopped

hurting and now she's perfectly normal. Then she got her daughter involved and I'm reversing all this stuff and her daughter and I'm working on all the grandkids.

So I said, take that little grand baby of yours, hold her to your chest and look up and hold your breath and just feel the heartbeat of that little grandchild. 'cause every time she did, she went from this frown of kidney failure to like giggling. So she's holding it to her chest. We've already cleared her and she's holding it to her chest. She says, I can't hold my breath. I'm giggling so hard. She says, I feel like a little girl again. So we reversed the curse, the diagnosis conflict that her mother gave her, how bad a girl she was when she ran over the bike that she put behind the car. So little children look up like this. You're such a bad girl.

Same thing with the diagnosis conflict. So that mother looked like an authority, a false god. That doctor looks like an authority, a false god. That priest looks like an authority, a false god. That pastor looks like an authority, a false god. Why do you need anybody between you and your creator? You don't. As soon as you realize that you're free, and we teach people to do that, Wendy, you know it because you implement it every day. What do we do for the children we've worked on, we set them free. How do we set them free? Because the people that were a threat to them, we basically make sure that they're no longer a threat.

So the power of God's love puts them in the dirt. The power of God's love destroys the perpetrator. 49% up to 62% of all the people I see, males, females in particular, and males, secondarily about 22%, they've all been molested as children and over 82% of them by family members. So remember I told you about the lady who said you have liver cancer, you have sarcoma, you will not live. The lady is a very tough lady. So she comes to see me. She has a tumor the size of a basketball. She has a sarcoma across her belly. She had been molested from the age of three to the age of 10 by her father and her grandfather. So when we reversed all those conflicts in her, those tumors went away.

Six weeks later, she has one of the bowel residents, and I programmed all that into her device. She starts working on herself. I said, stop talking to your husband 'cause right now that's not a beneficial energy. So she put earplugs in her ears whenever her husband would complain. She couldn't hear it. I said, it's perfect. So she starts working

on herself. In six weeks, that basketball sized tumor in that sarcoma went away and she shrunk down from what looked like a size 18 woman, which she wore this tent dress to cover up these tumors.

Now she's back to a size four, and to this day, she has no cancer. I said, now wait six weeks. Go take every conventional test. How many tumor markers should I do? I said, all of them. There's 27. Get 'em all done. I said, get 'em all done. So she got 'em all done. She had no more tumor markers. She has no more cancer. She had no more anything. What did we clear? The molestation. What did we clear? The abuse? What did we clear? Self-talk. Self-talk was horrible. Now what's happening, Wendy? She's a very, very wonderful horse breeder.

Are you taking collagen supplements? Well check this out. Our friends at Organifi have sourced the best collagen on the planet, and you can get it with 20% off savings today too. So, what is collagen? It's the most abundant protein in our body. It's everywhere. It's in your muscles, joints, hair, skin, fingernails, everywhere. It's one of the fundamental building blocks of life. Your body uses collagen constantly to keep itself refreshed and repaired. But as you get older, especially as women that are going into menopause, you can lose 30% of your collagen within the first five years of menopause, and that starts in perimenopause as well. Your body just stops making as much of it and you start losing it, especially as your estrogen levels come down. That's why consuming collagen is such a great idea every single day. It gives your body a fresh supply to keep working at its best.

It's not only good for your hair, skin, and nails, but it helps to support your gut and metabolic health, immune system, cardiovascular strength, and all of your muscles and moving parts too. Collagen is nothing new. It's one of the oldest supplements out there. Collagen supplements have been around for quite a while now. But what makes Organifi so special is it's all about the quality. The non-organic collagen scare 16 me. They're really problematic because they can be full of glyphosate, pesticides and other chemicals that you do not wanna be taking on a daily basis. Not all collagens are the same. It can come from many different sources and the source can drastically impact its potency and effectiveness as well.

Some manufacturers just go with the cheapest stuff that they can find and then add fillers and artificial flavors and they still charge you a lot of money for that. Organifi always goes the extra mile to ensure their quality is the best. They blend five collagen types from four different sources, and they taste and test until it's perfect. And then they go even further to test for things like glyphosate residue and other sneaky toxins that can get into the mix. After passing through all of these goalposts, it finally gets the Organifi seal of approval so you can rest assured it's the highest quality and non-toxic. I love that this company is a company that I can trust that their products will be safe and effective exactly as they say they will be.

In the supplement world these days, that kind of honesty and transparency is getting harder to come by. So, if you've never tried collagen, now is a great time to start. And if you're already taking it, now is a great time to switch to a better brand. Upgrade what you're doing right now so you and your entire body is gonna love Organifi Collagen. It is something that I take on a daily basis. It's been a part of my supplement routine for the past five years, since I went into menopause, and so I can't recommend it highly enough. Now let's talk about saving you some cash as well. Here's what you do. Go to organifi.com/myersdetox and put in coupon code Myers detox to get 20% off. Go to organifi.com/myersdetox and don't forget the Myers detox coupon code as well. You'll save an extra 20% off by putting in my special coupon code Myers detox. So, like I said, collagen's one of those things that I take every single day. It's one of the most important parts of my anti-aging protocol, the things I'm doing to fight off the clock. So for me, taking clean collagen is really important. It's hard to find, so I highly, highly recommend Organifi collagen.

Dr. Wendy Myers

Tell people about the bio resident software. This is software that I own and use every single day. It's amazing. Tell us what that is 'cause you mentioned it many times. I'm sure the listeners are curious.

Dr. Michael Rankin Sr

It's absolutely wonderful. You could probably see in the background. It's playing in the background because I have seven instruments around me for people that I'm

working on. Frankly Wendy, when I first get people and their brains are not working, there's no sense giving the instrument. I run it for them, which I do for everybody.

So this lady up in the right hand corner had two positive triple red branch cancer. She has nothing. But when her brother got diagnosed and she got into all the fear motive about her brother, she ramped up all of her cancers again. What showed up on the bowel resident, which is taking a simple little DNA sample or a photograph like this. This is my son's photograph. My wonderful son who's now six foot three towers over me. I put his DNA sample in the bowel resident system I was running on him. So when he was going through college and he was second guessing himself, I could see that the, all these black squares in his head, 'cause he's overthinking.

So I called him and I said, Daniel, let's reprogram something. I said, "What have you been thinking?" He says, I'm afraid I'm gonna fail. I said, well, whatever you're programming, I could see it in the black of your aunt. He goes, really? I said, where else are you seeing it pops? I said, I see it in your prostate. I said, why is that? He said, because mom's talking about getting married again and I don't like this guy. I said, that's the home. So it was affecting his prostate as a young kid. So we reprogrammed all that stuff. We were back and he got straight A's across the board. And as I did that, I'm working on his little brain.

I programmed his brain with that. Every word on the page, he remembers every word because it's already in his mind. I said, when you look, we just take the book and hold it to your chest. Jesus, I'm so grateful. I know every word in this book. He'd go and take the test straight A's. He's sort of like he said, I couldn't stop my hand from moving 'cause I knew all the answers. Everybody else took an hour and a half. I took 17 minutes for every test 'cause all the answers are already in his brain. I said, well see yourself writing the answers. He wrote all the answers and as I'm clearing on him, he has no more black on his brain.

He had no more black in his prostate. He said, pops, I didn't want to tell you, but I had a really hard time peeing because my prostate was swollen. He said, now it's fine. So what happens in his swollen prostate, whether it's a boy or a man, the prostate holds shame. So when you say the word, sorry, you jam up your breast, your uterus, endometriosis, and prostate with shame. When you fill up your prostate with shame,

you could literally see it on the bowel residents. I could see all the fungal infections there. So we do a short scan, which is all the organs. We do a long scan, which is all the RNA and DNA. We do a long scan, which is all the microbes.

And then once we've done those scans, then remotely by DNA, I can send back the fix or the bowel resonance reversal. It's electronic acupuncture, so it's light and sound therapy passing through the DNA to anybody in the world. As you well know, 'cause you've been running it, when you have a really challenging day, if you just had that thing running in the background, it's taking all the challenges away from you.

We call it the founder of youth, Wendy, because when I've been running this thing now for about 16 years, my biological age is 23. Okay? I checked it this morning with Raymond Grace, who I truly love. We do a lot of sessions together. I said, Raymond, what's my biological age? He says, 23. I said, what birthdate am I on right now? He said, you're the biological age of Michael's birthday. August 7th, the day that Michael was born, and the day I touched his little body was the day that Heaven opened up and poured that little body in my hands. That's why Michael today is one of the most famous doctors in the world, because he's the only doctor I know that reverses all pain for all time, including rheumatoid arthritis, trigeminal neuralgia, and sciatica.

We're on an airplane. I'm talking about sciatica. The guy next to me, a young kid, goes, oh, I have terrible sciatica. How long does it take to reverse? He says, if it takes me more than 12 minutes, he said, I think I'm doing something wrong. 11 minutes. He goes, yeah, 11 minutes. He goes, that's easy. I didn't know how hard it was. That's Michael's phrase. Now, I didn't know. When this lady came up to see him with rheumatoid arthritis, 64 years of pain, Wendy, I ran this lady's DNA in my scan before he worked on her total black.

Her entire body was total black squares, which means her whole body was blocked, everything was blocked on. Michael took 32 minutes, I believe, to completely get this woman in pain, out of pain, 64 years of pain to no pain. I said, Michael, do you realize nobody does it? He goes, well, I didn't know, so I didn't know. I couldn't. Trigeminal Raja, what do they call it? Suicide pain 'cause it's pain in the face. It's a pain forever. How do we know? When I run somebody's DNA in the bowel residents, Wendy, with trigeminal neuralgia, all these nerves are blocked back to their amygdala and all

these nerves are blocked up to their teeth because of root canals and other dental issues.

When people go to a dentist, they have no idea. When they use dental stuff on your mouth, they start injuring your mouth. What do you think that does to your organs? Horrible things. That's why it's so important to not do that, because when you go to a dentist haphazardly and you think they're gonna do something good for you, that may not necessarily be the case. That's why we check out the dentist ahead of time and we say, good or bad, or don't go at all. I went to a dentist, I think about nine years ago because I broke a tooth off and I thought I didn't wanna look like the Beverly Hill bullets with a hole in my mouth. So they made a little tooth thing for me that was \$1,200.

Well, a lot of profit. I got that down. That was 11 years ago. Part of that was 37 years ago. So I used a Ty called Nature Rains because you know, when I tested Michael for cancer, I think it was 10 or 11 years ago, he had 16 forms of cancer. He had 16 teeth that were horribly out of balance. I could see it all in the bowel resident system. Everything was blocked. All these organs were blocked. He had 16 types of cancer. Wendy, when I saw that, I had to mute the phone, I thought, Jesus, what? And excuse my language, but what the heck is that? I cleaned it up for a moment. I said, Jesus, what the heck is that?

He says, it's a revelation of my love absent. So I got back on the thing and I said, Michael, he said, what did you see pops? I said, Michael, I saw the absence of God's love. He said, well then fix it. Tell me what to do. We both started laughing. I said, Michael will tell you what to do, the most stubborn human being on the planet of Earth. He goes, no. He said, I really mean it. And I said, I know I'm muscle tested. He said, let's go. So we did. Four and a half months later, he had no cancer. He had no issues with it in his teeth in three months. The first month, Wendy, he had 16 teeth blocked. In the second month, he came back and said, pop, by the way, right before our meeting, I found this product called Nature Rains.

I tested, I said, Michael, it's gonna heal your mouth. He said, then do it. So he did. He sent me a sample of it. Within one month, he was down to three teeth out of 16. Within two months he was down to two and, and by the final month he had one. And by the

last month he had none. His cancer was gone, his teeth were clear, and bowel residents showed up completely clear.

So the whole time we're doing this work, I'm sending him frequencies. We're also doing the emotional release work, which we had never done, which was so fun with Michael. He said, pop, that was the most fun thing I've ever done. He said, I thought you're doing this psychological psychobabble, psychiatry, psychiatrist, whatever. He goes, thank God you weren't doing that. I said, no, honey, we're doing emotional release because emotional release is a conflict that you're holding onto, which has caused the cancer in the first place, which went back to when he was a child. He was carrying the issues of his grandpa who had a word curse from the great grandmother who was a horrible, wicked woman.

She was probably a witch. I'm fairly sure she was a witch. She was a very dark, dark, dark person that did terrible things to grandpa and those things came down and were going down through her mother. She had had some terrible experiences and so all that landed in Michael's lap 'cause Michael was very close to grandpa. They loved grandpa 'cause he smoked these big cigars. He made steaks all the time. He was a very fun grandpa. So we cleared all that stuff and then Michael's cancer went away and has never come back. Then, little did I know that that experience we had with all the releasing and all the bowel residents, all the other things we did to clear him, inspired him so much.

He thought, well, I can do this. So he did. He went on to become the doctor that he is today, based on the conflict we had and the resolution of that conflict. Wendy, have you known Michael and you've worked with Michael? He's like pure love. When Michael's working on you, he'll say, oh, what happened when you were a teenager? Well, on his other part of your spine, what happened? And people just cry and cry and cry. How do you know that? Well, what happened? They tell him, well, you're holding that block in your spine. You're holding your block in your tailbone. You're holding that block in your uterus. You're holding that block in your neck.

So he can tell all that when he is working on people. He knows when he has hit a point. 'cause people just start bawling like babies because he released the energy. So it's the unblockage of energy when we do all this work, Wendy. The most important

thing that we deliver to people is hope. One of the most important words I wanna really encourage people to claim is "I'm so grateful for." If you say, I hope for something, hope's not a verb. I wish I had. That's not a verb either. I'm praying for somebody. That's not a verb. Claim it for them. If you tell me you have faith, then claim the faith.

When it says, I have the faith of a mustard seed, what does that mean? You can move a mountain. What's the mountain? So if someone has breast cancer, they're a friend of yours. Oh, I hope you're gonna be okay. What does that do? Nothing. Oh, I'm sorry you have it. You just gave 'em a curse. Why do you say sorry? It means you expect them to die. Don't do that. You're not helping anybody by saying hope, and I'm praying for you, and I'm sorry this has happened to you, blah, blah, blah. Stop it. Stop it. You're cursing people instead of helping them. Why don't you say, I'm so grateful you're healed.

What's the mustard seed? The mustard seed is a tiny, tiny little seed. You almost need a magnifying glass to see it, but the faith of a mustard seed can move the mountain of your friend's diagnosis conflict. So when someone says you have breast cancer, you're gonna die. They've been cursed by somebody. Soon you say, I'm so grateful you're healed. I'm so grateful. You don't believe anything but God's love. I'm so grateful you're healed now. You've done something positive. Now you've given them hope because you've given them hope by saying, I'm so grateful you're healed. I'm so grateful you're healed. If you don't have that type of concept, then just get a hold of me and make an appointment and I'll teach you how to do it. Then everybody will heal.

In your entire family, everybody. You've seen children, Wendy, you've dealt with children. Michael's dealt with children with vaccine injuries and what do they do? My child has a vaccine injury. My child has autism. Stop saying that. Stop saying that you already curse the child with a very dark energy called a vaccine, which is a very dark energy, which upsets the entire body's energy. Why don't you reverse it? Oh, I'm so sorry for your child. Stop saying that. I'm so grateful your child is healed. Then go see Michael, do a laser detox and get rid of it, which he's done time and time and time again. Reverse it.

The faith of a mustard seed is to say, I'm so grateful that you're healed. That's the word that people need to hear. I'm so grateful. You're whole and happy. I'm so grateful. You're whole and happy. I'm so grateful you don't believe the diagnosis. I'm so grateful you believe that you're full of God's love. I'm so grateful. I'm so grateful. Keep in mind, Wendy, that 97% of all people that receive poison after a diagnosis of cancer are people that say they believe in God, 97%. How does that happen? The diagnosis of conflict is the metamorphosis of the imagination into the grave. How do we reverse it? I'm so grateful. You're whole and healed. I'm so grateful. You believe in God's love. I'm so grateful. The diagnosis, the poison you've been given, has been reversed with the same power that hit you.

I'm so grateful that's been reversed and given back to you as God's love. We are a radio device. What is a radio device? It's an energy device that people have made so beautifully that delivers energy. So we are the people that deliver energy. We have frequencies in our voice. That's why I encourage people to go to my testing cancer webpage, Wendy, and get the healing scriptures on there that were written by a beautiful woman who had a breast cancer diagnosis. Her husband was a famous preacher. She thought, I don't need any of it. I just need the healing scriptures.

So she looked them all up. She tied them all out, and then she gave 'em to everybody. I think it was 45 years ago. I discovered them. I put 'em on my webpage. You take those healing scriptures and you read 'em out loud. While you're reading, you put one hand over your heart to look up like this. So now you're programming your office cycle. I'm so grateful I'm holding and healed. And then read the healing scriptures out loud. Now your voice is reading these healing scriptures to yourself, and then you go back and listen to it. Your own voice is the thing that's going to heal you, not somebody else's voice. I'm so grateful. I'm already healed. And then you read the healing scriptures. Then you listen to them

Dr. Wendy Myers

You get those on testingcancer.com Okay?

Dr. Michael Rankin Sr

It's a free download. You've got a juicing protocol, which is exquisite. It's a beautiful protocol. One of the reasons why juicing protocols are effective is because when you've had chemo or radiation, they kill your immune system. They lower your voltage. So you really don't even have the ability to break down foods. So when you do that pro dosing, juicing protocol that I put up there, it comes to you as a raw enzyme. Now your body will absorb that raw enzyme. So until you get help from us or whatever, you're able to get those raw enzymes into your body, you could start to heal.

And that's why we also suggest coffee enemas from the proper coffee source, because when you do coffee enemas, you get rid of that poison that's put into your liver, which kills your liver. All 97% of all digestion doesn't happen in the gut. It happens in the liver. What is the number one reason for colon cancer? Holding onto old stories literally and figuratively. Stuffing that stuff. How do you stuff it? Sorry, sorry, sorry stuff. Your colon stuff. For women, they're literally stuffing that into their breasts.

For men, they're stuffing it into their prostate. For the rest of 'em, they're stuffing it into their colon. That's why colon cancer is so onerous. People are so dehydrated, Wendy, that they've got anywhere from five years to 45 years of old dead fecal matter in their colon. You wanna see what that looks like? Take a steak, a really nice steak. Put it out on your sidewalk. Leave it there for three days. Let it sit there now. Bring it in and eat it. Oh, I wouldn't do that. Well, you're doing it in your colon anyway. So you got this old dead rotten piece of meat that's been touched by flies and has larva on it and all kinds of stuff.

So you have that in your colon. What do you think that's gonna do? Nothing good. So when you hydrate, you do, my voltage, hydration protocol, which we can send to them either as a download or off of my webpage. The Voltage hydration protocol has many different elements in it. If you just start doing that, you'll start healing. Everything is a download on testingcancer.com, and if you'll get that, it's free. You read it. If you have a punch about it, just send me a bullet pointed list. I will not read paragraphs, I will not read stories. Don't gimme a 40,000 word story. I will not read it if I read more than three words and it just goes on for there.

I promise you I won't read it. If you gimme a bullet pointed five words, I mean five lines, 10 lines, 15 lines, 20 lines. I'll read bullet points if you tell me what you want. Can you tell me what the issues are? Then you can make an appointment at testingcancer.com. Do a one hour consultation. It can literally save your life. We record every word we say. We send you back a transcript, we send you back the audible, and we send you back a synopsis. We will send you a bullet point of what to do after our meeting. Nobody does that. You go to a doctor, you remember maybe 2% at the most, and what you've heard is probably not useful anyway.

So it's just like that, you don't listen to it. But if somebody wants to put poison in your body, realize that's not God telling you to put the poison in your body. It's ungodly, somebody telling you to put the poison in your body. Mothers need to protect their children. If somebody wants to put poison in their baby. One of our docs, I can't say his name on screen, but one of the doctors went to the hospital. And had his 45 on his hip and told the nurses at the nurses station, if you touch my baby with a needle, this thing on my hip will come off and nobody will be living. If you touch my baby, you harm my baby. That is my baby, that is my grandson, that is my son's child. If you touch my baby, I have the right to take you out because you've harmed my family member. Don't touch my baby.

They didn't touch the baby. Okay, protect your babies. The only ones that are gonna protect the babies is the head of Alice, old fathers and then mothers. If nobody's gonna protect that baby, then nobody protects that baby. If your baby's already harmed, it's completely reversible, completely. Michael's reversed every vaccine injury, every pharmaceutical gene drug injury. So I get the people that are concerned, they're not gonna live, but I'll take other people. I'll take anybody on a one hour consultation at testingcancer.com and tell you in one hour how to reverse whatever it is you're dealing with, and you'll be completely cured by clear by the time we finish an hour's consultation, exactly what's wrong, how to reverse it, what steps to take, and what to do it on your own.

It's not rocket scientists. And by the time we get done, you'll know more than all the professionals you've ever known. If you get the books I mentioned earlier, if you forget, just send me an email, say book list, then I'll send you the book list.

Ads 01:02:29

This episode is brought to you by Chef's Foundry. They've got a fantastic line of cookware called P600. It's totally non-toxic. I think people don't realize that when they're cooking, most people's cookware is adding toxins to their healthy food. People spend so much money on healthy organic food and then cook it in toxic cookware. That includes cast iron, which I do not recommend. It adds way too much iron in a form that we can't absorb. People use aluminum cookware, which is very inexpensive, but it's used in most restaurants, giving us tons of aluminum. People are also using ceramic cookware, which can leach toxins into your food, and not to mention, the non-stick cookware that has many PFAS or PFOS, that is so toxic. It's one of the forever chemicals. So, you really have to pay attention to what you're cooking in.

That's why I recommend the P600 line by Chef's Foundry so that you can have peace of mind when you're cooking and you're not getting any nasty chemicals like lead or cadmium or nickel, or PFAS in your healthy food. You can get a special discount for my listeners by going to bit.ly/myersdetox to get an exclusive discount, just for my listeners. I want you to be thinking about what you're cooking your food in, and I highly recommend the P600 line by Chefs Foundry.

Dr. Wendy Myers

You know what I love about interviewing Michael? 'cause I can just sit back and relax.

Dr. Michael Rankin Sr

Well, Wendy, one of the beautiful things about you is you bring out the best in people. It's your nature. It's why you've been so successful over all these years. When I watched the first thing that she ever did, I went, oh my God, what a hottie. And she's smart too. The stuff that comes outta this beautiful woman's voice, I wanna remember. So I started recording your videos because I thought I'm gonna learn from this woman. Then eventually she came to me as a patient. Then we started doing the podcast. You know how many people have come to me and said, because they listened to our podcast, their lives were spared. They're literally living today, Wendy, because they listened to those podcasts we've done in the past. The people

listening to this podcast we're doing today, they will literally survive when they might not have survived because of the curse that has been put upon them by the diagnosis conflict, never for the rest of your life.

The most important thing everybody will remember, never say I have unless you say I have God's love for me. Yes, say that. I have my mommy's love for me. Yes, I have. What's the most important thing I ever did for a woman, Wendy? She had huge breasts. They were very, very large breasts, but one of 'em had a hole in it this big, and it's full of fungus. Why did she have this hole in her breast full of fungus? Because she aborted her child at 19, she's now 42. I had to clear everybody out of the clinic because it was horrible that she had literally had a rotting breast and she wanted to die 'cause she killed her child. She didn't know that.

So she kept saying, oh, Dr. Rankin, I'm so sorry. I'll never have a child. I said, what do you mean you don't have a child? You have a 19-year-old and it's a little girl. And she cried and cried and cried. She can't speak. She goes, can we talk about her tomorrow? I said, yes. She went home, and I said, when you're in bed tonight, put your hand over your breast and say, Jesus, I'm so grateful for my little girl. The next day she came in, there was no more odor in her breast, and it stopped rotting overnight. She said, my baby's name is Rose Jane. I said, now we'll get rid of the rest of the fungus. You know what she did, Wendy? She took the image of her baby and she gave love and milk to her baby energetically while we worked on her.

That four inches of fungus went down to one inch in one day. I said, so keep feeding your baby, honey. I love you, Rose. I so love you. I so love you. I'm so grateful for you. I'm so grateful for you. By the time we finished that 10 days she had no more fungus in her breasts. This is amazing, Wendy. Women give love through their breasts. They give energy and love. It's not just milk, it's energy and love. You're literally giving all of yourself through that breast. That's why breastfeeding is so important. If a woman is having a challenge with breastfeeding and gets a hold of me, I'll teach you how to get past that challenge because 32% of all women that don't breastfeed feel unworthy to breastfeed.

I can teach you how to feel worthy to breastfeed. I can also help you get past the tenderness and all that sort of thing, which you can do very rapidly. Wendy can also

teach you how to do that. Wendy is probably the best at teaching women how to breastfeed than anybody I've ever worked with. You're really good at it, and you teach 'em how to give love to their babies. That's why your daughter is like superhuman. I just love your daughter. She's just a piece of work and she's so smart and she's gonna bring about so many wonderful things in the world because you gave that woman that beautiful child who's now a woman.

You gave her everything and you gave it to her through your breast. So no matter what was going on around you, the only thing that mattered when you breastfed that beautiful child is your love and that pure love carries with all the days of our life. Wendy, I know and a revelation I received many years ago is that before God places us in our mother's womb, he prepares us with pure love and the light and love that he gives us, which he talks about in the first part of the Bible. He prepares us to be in the womb 'cause he knows what's coming. It's not like the future of anybody is a mystery. He places us in our mother's womb with perfect love. And that perfect love carries us all the days of our life. So if we always go back to that original time when we're placed in our mother's womb, that it's always there and it's the source of perfect love all the days of our life.

If people will remember that, if mothers will remember that about their babies, no matter how bad that baby's been injured by a bad decision or a bad diagnosis or whatever, it's all reversible. Just remember that one point when that baby's placed in your womb, it's perfect love. We can help you get back to that perfect love. And then you've got a perfect child. You say, my child is ADD. What does that mean? I said, no, you're giving a curse to your child. Your child is one of the smartest children I've ever met, but I can check them energetically. I said, why don't you just help them? I said, the child's been injured by vaccines, injured by pharmaceutical drugs and your pharmaceutical drugs, and your vaccines and your body, so stop cursing your child.

I'm so grateful. My child is whole and healed. I'm so grateful. My child is such a genius. All ADD and ADH children are all super smart. Stop cursing your child. You have ADDAADAD. Stop taking the doctors that do that. You're insulting your child and you're harming your child. If mommies don't protect their children, then nobody's gonna protect their children. Nobody, nobody, nobody. Every father I've ever talked to, I said, you're standing at the door with an AR 14. Michael told me that's a better gun than

the ones I was talking about, a 12 gauge shotgun. He said AR 14 is much more effective.

Well, you're standing at the door protecting everybody inside the family with an AR 14, I like my 12 gauge semi brownie, semi-automatic. But he likes the AR 14 from an energetic standpoint. He said, you're standing at the door. Nobody's coming through the door. Daddies are standing at the door protecting the children. Mommies are inside protecting the children. Protect your children from harm if something has happened. Don't start putting a curse on yourself. Oh, I hurt my child. Stop the nonsense. I'm so grateful. My child is whole and healed and I'm so grateful I figured out how to help my child recover and be completely normal. That's how you reverse it. That's every time. That's how you reverse it. Wendy, on testingcancer.com you literally have every answer you need. The whole thing is not for selling products. The whole thing is for study, study, study, study. You study that whole webpage, which is four or 500 pages long.

You can actually do a word search and find out what you need. You can get your downloads of the healing scriptures, you can get the juicing protocols. You can get food. I got a 45 page booklet that you can get for anybody that has a health challenge and do that booklet, use that product, use those things on there. They're free for the taking.

Dr. Wendy Myers

I wanted to touch on mental health diagnoses. One thing that just drives me nuts is when I hear people say over and over, I have an anxiety disorder, I have an anxiety disorder. They just repeat that over and over and over. They just become it. And it becomes a crutch for them because they've been told this by a person of authority and they believe it when that person has not looked at their emotional trauma, their diets or rhythm management, their sleep, their exercise, their nutritional status, or infections.

They haven't looked at one thing, no brain scans, nothing. It's like the only profession where they're not looking in doing any kind of tests internally to see, and they just give you a prescription and good luck. Let's see if that works. Let's roll the dice and

take that gamble. We see this from young children to older adults. Can you talk a little about that?

Dr. Michael Rankin Sr

I'd love to Wendy, because it's one of my favorite topics and I've gone through it. When my son had a skateboarding accident, he damaged his brain so badly. He was bleeding out of his ears and his eyes and his nose. I mean, he looked terrible. I really had to compose myself and be his doctor and not his father because his brain trauma was so bad that his brain looked black on his CAT scan. I got a CAT scan so I could show later what we did, and that's the only time I've ever had a CAT scan on anybody except Michael. When he shattered his hip, they said he'll never heal from it. So what happened with Daniel is shortly thereafter, because of that brain trauma, and thank God no drugs, well, I beg your pardon. He had been exposed to Adderall at a private school, then he had brain trauma. He got on the skateboard and did something stupid because of Adderall. When he went off that hill and he came down off that hill, eight feet in the air, his head hit the ground first three times.

Shortly thereafter, he was full of anxiety because of the brain trauma. Fortunately, he had a dad, me, that would not give him a drug ever. And so the first thing we did was to reverse the brain trauma, get him hydrated properly, get him over his self condemnation, never expose him to SSR drugs or any other poisonous drug. 100% of all people that have had an anxiety issue, have a brain trauma secondarily because of vaccine injuries, COVID injection injuries or pharmaceutical drug injuries 100% of the time. If there's anybody out there that has anxiety without those, that means they have brain trauma.

Those are the four categories. So if you put a drug on top of that, what are you gonna do? You're basically gonna cover up the damage by putting another poison, which is gonna make it worse. So one of the areas of anxiety, Wendy, that is so terrible, is that the parents will shame that child. You have anxiety. You have anxiety. You have anxiety. Stop cursing your child. Shame on the people that are doing it. Never do that again. Honey, I'm so grateful that you've shared this with me. Let me help you figure out why you have anxiety. Then you say, Jesus revealed, it's the nature of my child that has anxiety.

When did it happen? God talks to everybody. If you have the ears to hear, you'll hear, every patient I've ever helped the most are the people that come and tell me what's wrong and how it happened. 100% of the people who help get the most in the fastest way tell me what happened to the child. Why does their child have anxiety while their child has sleepless nights while their person has whatever they have? They could tell me when you curse a child and say you have anxiety, stop doing that. Stop doing that. Stop doing that. Well, if they have it because of something that happened to their life, you weren't born with it.

If a mother has vaccine injuries of any kind, pharmaceutical drug, injuries of any kind, or the COVID injection of any kind. They have a baby in the womb. That child has a 92% chance of having some kind of anxiety. What happens, Wendy, is like every other health challenge. If you keep screaming at the child with anxiety, you're gonna make them feel worse and ashamed when you feel worse and ashamed. Ironically, the part of their brain that causes the anxiety is where the shame goes.

So if a child has anxiety because of something that happened to them at the hands of their parents or inside their mother's womb, don't feel ashamed about that either. Just understand that's a conflict. Reverse the conflict, but to shame a child because of anxiety or to allow a teacher to shame them because of anxiety. Let me tell you something. Not one teacher will ever say one bad word to any of my children. No, no, no, no, no. Never happened in my lifetime. When Daniel had a really bad teacher at one of the private schools, we put him in, I wanted him to get away from her so badly 'cause he was really a horrible person. I mean, on every level.

She was dark, dark, dark, sedan dark. Daniel said, Baba, don't talk to her. I know you know what's going on, but don't talk to her. I'm gonna handle it. I said, okay. Within a few days, we're having a parent-teacher conference. The head of the school called us in and said, Daniel, I'm so excited we have a new teacher for you. That teacher that was teaching you was so terrible. We fired her because she's harmed you and many other children. And now we have this new teacher, this six foot seven football player, big Musk guy. He was there to meet Daniel and us. He said, Bob, what did I tell you?

On my phone, I have a piece of burning paper. Why do I have a piece of burning paper? Because at night I went home and at 2:30 in the morning, I still had some angst about the harm that was happening to my child. I thought I cleared it. But when you wake up at 2:30 in the morning, that's liver or lung for me. So I sent a note to Daniel and said Daniel, I'm grateful that everything is whole and healed. He said, Baba, did you burn your paper? So what I do is I take a piece of paper and I write down all the stinking thoughts for the day. I put it in this thing. I burn it, put my hands over my heart. I say, Jesus, I'm so grateful. My son is whole and healed. I'm so grateful. I'm whole and healed, and I'm so grateful.

I no longer have to think about that. I burn it. So it's now ashes because I can't go back and read it. What's the worst thing you can ever do? Journal your crappy thinking journal. Your crappy thinking journal, your crappy thinking journal, your crappy thinking. What is your diagnosis? I have, I have, I have. Burn that thing. Take it to the wood pile and burn it. And as it burns, say, I'm so grateful. I'm free. I'm so grateful. I'm free. Crabby thinking in a journal is horrific.

For anyone listening who really wants to detox their body, go to heavymetalsquiz.com. I created a quiz for you. It only takes a couple of seconds and it's based on some lifestyle questions. You can get your toxicity score and get a free video series that answers all of your frequently asked questions about how to detox your body. Check it out at heavymetalsquiz.com

Dr. Wendy Myers

Yeah, you have to flip that script. And it's a practice. It's something I have to do to catch myself doing. You have to flip that script and talk about what you want to happen, what you think about it, and say it like it's already happened. Like you keep saying, this whole podcast, you give alternatives to what people should be telling themselves, should be saying themselves and should be saying to their children.

Dr. Michael Rankin Sr

There're several words we never use. Wendy, you and I have had so many good discussions about this, we never use should, 'cause that's a shame word we never use could 'cause, that's a shame word. We never use the word, sorry. We never use, we never use. I feel so bad. Oh, I could have done this, blah, blah, blah. No, we think about whatever it is, and I'm so grateful for that. So let's say this morning that I wanted to do this smoothie that I've gotten from Al McPherson called Elixir.

It's pure magic. I wanted to make my elixir and I got so distracted playing with the dogs that I didn't have time. So what did I do? Instead of that, I made my stove top espresso. I'm so grateful I made my stove top espresso, and I'm so grateful it replaced the elixir.

Dr. Wendy Myers

It's so funny, I've beaten myself over not making smoothies. I can't even tell you how many times in the last couple weeks I wanna start taking more creatine and collagen. I can't seem to get around to it. And it's just so funny that you said that.

Dr. Michael Rankin Sr

Well, I can't get around to it. What I do is I put the elixir bags from Al in front of my coffee. I put my coffee maker behind the elixir pad. So the first thing I have to do before I get my coffee out is the elixir pads.

Dr. Wendy Myers

Well, Michael, thank you so much for coming on the show. I love picking your brain and love talking to you. If I can talk to you for hours and hours, like we always do when I come up. It's really important for the audience to be hearing these types of things like different ways of thinking, different ways of approaching their health, approaching their thoughts and how they will manifest their thoughts. You have to be very careful what you're thinking and writing and saying, because you, you will manifest that.

Dr. Michael Rankin Sr

This last topic that you brought about anxiety, all children that are diagnosed with ADD, that's a form of anxiety. Every one of those children that has anxiety or ADD or whatever else, it's all because of vaccine injuries, pharmaceutical drug injuries, or the COVID injection, it's a hundred percent reversible, a hundred percent.

So please understand that that beautiful child that you were given by God is still a pure and beautiful child. If they're acting inappropriately or unsettled, it's completely healable. I'm just gonna say right now, I'm so grateful that everybody that's listening, when you hear my voice, if you just look up and listen to my voice, say this, I am so grateful.

I'm whole and healed. I'm so grateful my child is whole and healed. I'm so grateful. I'm so grateful. I'm grateful. I'm so grateful. I'm such a wonderful mommy. I'm so grateful. I'm such a wonderful daddy. I'm so grateful. I'm such a wonderful grandparent. I'm so grateful. I'm whole and healed. And let that be the only thing you think and let that be the only thing for your children and grandchildren every year.

And when you get on testing cancer, we're gonna add this to the testing cancer webpage. You'll get so many wonderful things on there that you'll be able to use and benefit from. So many wonderful free materials at testingcancer.com. Wendy and I can't underemphasize. 32% of all the people that hear this talk will say, well, I'm not Christian. I'm not whatever. I don't care what you are. If you read the healing scriptures, there's some incredible wise wisdom of love in those healing scriptures. If you'll just read them, it will circumcise your heart and you'll see the true person looking in the mirror.

If you could sit in front of a mirror, especially after a shower, what? When are people the most vulnerable? When are women in particular, the most vulnerable? After the shower, they're wet and vulnerable, naked, standing in front of the shower. What's the first thing to do? Cover themselves. So this time you take your shower, you stand in front of the mirror, you're wet, vulnerable, naked, and you just say, I'm so grateful.

You are who you are. I'm so grateful. I am who I am. I'm so grateful. I love myself so unconditionally. I see every part of my body, and I love every part of my body. I'm so grateful. I'm all healed. That is the most vulnerable place you could be. And then as you get that one last positive message, now you can walk off and cover yourself and

let it sink in. And think of, oh my goodness, I love who I am. Because everybody listening, Wendy, they're listening because they care about who they are. They care about helping other people. They care about helping themselves. They care about their children, they care about helping their grandchildren. All the answers are gonna be in this one meeting we've had today. It's gonna be one of the most monumental we've ever done.

Dr. Wendy Myers

Well, Michael, thank you so much. We're gonna close on that note. So thank you so much for that message. I always feel so inspired when I talk to you. I always feel so much better in your presence and your positive attitude and your smile. That's why when I'm having any kind of issue that I just can't seem to get past or I get stuck, I call you up or I go visit you on your ranch in St. Louis. I just love you and just thank you so much for doing what you do. Again, you wanna learn more about Michael, you wanna make an appointment, go to testingcancer.com. I promise you, you won't regret it. I'm Dr. Wendy Myers. Thanks for tuning into the Myers Detox podcast and I'll talk to you next week.
